Childworks Play Systems Specifications

Product Specifications

1.9" O.D. Galvanized Pipe and cast aluminum fitting are used for the structure of the playground. We also use 5" O.D. pipe and cast aluminum fittings for cantilevering over seating or other structures as shown, for a strong durable playground.

All structural Plastics are 3/8" low density polyethylene with UV stabilizers for long life. The Strongest in the industry.

Plastic connections are made with our specially designed hardware for a smooth finish on the interior and exterior. Corrosion resistant for maximum life.

Duranet is used for containment of the playground. It provides good visibility and is virtually maintenance free.

Exposed pipes are wrapped with tuff-skin foam, with a co-extruded exterior polymer coating that offers long life cushioning and comfort.

Our duradeck surfacing is a slip resistant cushioning rubber surface that meets all the Consumer Product Safety Commission tests, both head impact criteria and fall height requirements to reduce injuries.

AAA State of Play has specific policies regarding warranty issues. For more information please visit: <http://www.aaastateofplay.com/policies.php>.
