- Customizable color options
- Shields rain from accumulating in the trash can
- Fits 32-gallon receptacles

The Rain Bonnet Flat Top by Webcoat is a practical solution to the annoying rainy days that can fill up and weigh down an uncovered waste receptacle liner. Thunderstorms can be one of the most inconvenient occurrences when it comes to park maintenance. Both sudden downpours and constant drizzles can increase the stress of routine bag replacement. All that water can add undue mess, in the case of a broken bag, or increase the chance of physical injury due to increased back strain. The rain bonnet component shields and rechannels the water away from the lid opening so minimal liquids make their way into the liner. The Trash Receptacle Rain Bonnet Flat Top is finished with a textured polyethylene that is resistant to the dimming effects of the elements, so the colors should stay dazzlingly bright for years to come. And if you don't like the color shown here, please speak to a AAA State of Play salesperson to discuss alternate shades available.
