Fall Height: 36"

Use Zone: 26' x 28' 6"

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

ADA Compliant

The Sweet Tooth Play Structure is more than a tasty visual bite serving an important purpose on the playground. The system is built around the aspects of child development through interaction with specific events that promote crawling, climbing, and game play. Starting at the top, the central Tube Bridge connects the two sides of the 3-foot high structure. The Double and Right Turn Slides can be accessed via the Transfer Station, Snake Climber or even the adorable Pea Pod Climber. The lower level presents a musical instrument or imaginative station on most of the posts. The compact design fits almost any space and packs a lot of play. The Tic Tac Toe Panel and post mount events are simple to understand, and yet provide valuable learning opportunities for children to self-educate. With all of the positive attributes, the Sweet Tooth Play Structure also includes a crawl tube that allows kids to crawl from deck to deck; making exploration fluid and fun at the same time. The effectiveness of the unit can be increased simply by selecting colors that will activate a child's interest and imagination. This unit is a personalized, fluid and developmentally focused playground.
