**Footprint:** 2' 6" long x 7' 2" wide x 5'10" high

**Use Zone:** 17' 10" x 19' 2"

---

The Rock Wall Tunnel is a simple apparatus that provides two functions. Firstly, it allows children to climb on the outside, using the foot rests that are firmly attached to the two joining panel. Secondly, children can play underneath the climbing frame and use the two holes in the frame to climb and jump through. The frame weighs just 280 pounds, and is easy to set up in your playground. It's an incredibly safe, durable and long lasting piece of kit that will provide you with years of use ahead. So for a climbing wall that offers that little bit more for the children, this is perfect.
