Enjoy the fun of a rainy day at any time with the Freestanding Make It Rain Panel. Designed for the imaginative minds of 2-12 year olds, this panel allows children to see how rain falls without getting wet. Tiny balls lay at the bottom of the circular window of the panel. When the window is spun upside down, the balls fall down to the bottom. There are a series of clear pieces set at different angles to provide a sort of obstacle course for the balls as they fall. Children will love watching the different patterns that form on the Freestanding Make It Rain Panel.
