

Standard Bench With Back

Price \$705.00

Highlights:

- Perforated seats for greater air flow
- Comes with a beveled edge
- Two legs so that there is more room underneath
- Back has a slight angle back making it comfortable

The Standard Bench With Back is a simple but important piece of infrastructure for any park, school, playground, or outdoor space. Everyone needs a moment to rest from time to time, which is why having convenient seating available is vital. It can be ordered in either six or eight foot lengths, so you can find the right bench to accommodate your available space and desired seating capacity. The framework is made from 14 gauge steel bars with a 2-3/8" outer diameter, and the seat and back are made from perforated metal with a high quality thermoplastic coating. The thermoplastic increases comfort, protects the metal, and increases its aesthetic appeal. The thermoplastic comes in your choice of available colors. The seat and back have no sharp corners and can be ordered with beveled edges along the seat. In-ground mounting, surface mounting, and a portable stand are also available mounting options, making installation simple.

The Standard Bench also comes in a backless version: Standard Bench Without Back.
