MSRP \$179.00

SALE \$151.00

Highlights:

- Looks nice when not in use
- Tamper resistant sizing and design
- Bicycles can be hitched up a few different ways
- Made from 2-3/8-inch outer diameter galvanized steel

Bike parking is a simple but greatly appreciated addition to any park, playground or place of business. If a location is accessible to cyclists, it will receive more visitors over time. This Loop Bicycle Rack provides any desired amount of bike parking. It can be ordered as a single inverted-U shaped rack, or with a continuous wavy pattern with up to seven loops. The single loop is perfect for parking an individual bike, but since bikes can either be parked under the upwards-arching loops or above the downwards-arching loops, each additional loop beyond the first increases the rack's capacity by two. For example, the 5 Loop Rack has a capacity of nine bicycles while the 7 Loop Rack can hold 13. They are available with either in-ground or surface mounting, so that they can be installed anywhere. Since each model is a continuous pipe mounted to the ground on each end, the high-capacity racks are just as easy to install as the smaller models.
