What could be better than a play panel that teaches about an every day task? One that also includes storage! The Gas N Go Trike Storage is designed to teach children about gas stations, while also giving them an opportunity to rest their legs from pedaling. Install this unit next to any trike path to create a realistic situation for kids as they need to pull off the highway to fill up. Pump handles are attached to the unit and allow children to go through the motions of filling their trikes with gas. Not only is this unit a great imaginative play opportunity, but it also comes with a storage area for trikes and other play area items. A secure lock keeps your items safe while they are stored. The Gas N Go Trike Storage features a powder coated steel frame and weather resistant polyethylene plastic panels. This ensures that the unit will last through several years of play. The unit is available as a surface mount to allow for secure fixing to any available ground type.
