- Surface designed to keep prevent dangerous falls
- 100% recycled shredded rubber from passenger tires
- Comprised mostly of 3/8-3/4-inch rubber granules

In the past, playground mishaps could often lead to severe injuries as children fell onto the hard ground. Thankfully, we now have a variety of ground coverings that can help cushion these falls, keeping children safe. At AAA State of Play, we carry a wide range of safe surfaces for playgrounds, including rubber mulch, a popular option for many schools and municipal parks. And with our low prices and quick shipping, we make it affordable and convenient to minimize injuries in your play space.

Playground surfacing is commonly made from either rubber or wood mulch, but the benefits of rubber mulch make it stand out as a top choice compared to other playground safety surfacing options. One of the best commercial-grade playground mulches is Playsafer rubber nugget mulch. Playsafer rubber mulch is made from recycled tires cut into a nugget form, and the production process turns these old tires into a safe and reliable product used in thousands of play spaces nationwide. Our rubber mulch meets the latest CPSC safety guidelines and ASTM standards for safe playground surfacing, and it has been shown to significantly reduce fall-related injuries, boasting the highest safety rating among playground surfaces. And although rubber surfacing is an investment, maintenance for rubber mulch is minimal, and each bag of mulch can provide benefits for many years. [\[Read More\]](#)
