Age Group: Adult

Footprint: 5' 3" x 10' 10"

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The Single Horizontal Ladder is one of children's favorite playground pastimes. This classic is designed to work the muscles in the arms of an individual who holds themselves up. In addition to the more traditional climb-across usage, it can also be used as a pull up bar or by holding your legs out parallel to the ground for an intense core and leg workout. Working out is made fun while chiseling your physique more finely with this system. This particular unit matches well with a more cardio focused piece of fitness equipment like the Single Country Skier. The Single Horizontal Ladder is an optimal addition to smaller space like a beach front or commercial space. Constructed from powder coat painted steel components and with additional gray plastic pieces, the Single Horizontal Ladder is designed to handle weather and high use.
