COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The Freestanding Octagon Horizontal Climber is an ingeniously designed overhead climber which allows kids to climb endlessly without ever having to touch the ground. They have the option of using either the left or right side of the octagon to get across, or they can attempt to complete the entire shape. If no one else is using it, a kid can climb around and around as many times as they like or can handle. The structure is held up by four strong powder coat painted, weather resistant steel support beams, as well as two additional support posts on both sides of the octagon which are built to add stability without getting in the way. This unit is hardy enough to handle multiple children climbing at one time. The Freestanding Octagon Horizontal Climber is guaranteed to be a popular addition to any school or community playground.
