The 1 Seat Bucket Swing Seat Package by Playground Equipment Dot-com allows even young children to get some swing time with its surrounding and protective design. Swing sets are one of the most used playground equipment pieces and kids of all ages find fun and enjoyment in the activity. The bucket swing is built with steel support to resist vandalism and give support, as well as tamper-proof technology with a special tool that only works with this swing. The bucket is designed to give the child back support while swinging and will help the child stay in the swing until they have the strength to stay on their own. The kit comes with two steel chains, one wrench, two single clevises and a seat available in three colors blue, green and black. It comes in two rail heights seven and eight feet. Swing sets higher than 8-feet should not use bucket seats for children's safety.
