The NatureROCKS Half Log Balance Beam functions as both a fun obstacle for kids to play on and a highly detailed decoration. Despite looking just like real wood and tree bark, this balance beam is made from high quality glass fiber reinforced concrete which is extremely solid and long lasting. It is then coated by hand with a weatherproof paint that is designed to withstand all kinds of inclement weather year-round. The Half Log Balance Beam is available in either 4 or 6 foot lengths, making it easy to fit anywhere. Install it between two larger playground structures to make a bridge, or near other steppers to give children a path of obstacles to navigate. It is secured in-ground with concrete during the installation process so that it will be as stable as possible while children balance on it.
