Unit Size: 20" x 32" x 29"

One of the most common problems which plague improperly designed bike racks are 'wheelbenders' or closely-spaced vertical bars which can cause entire rows of bikes to tip over, potentially causing expensive damages to their spokes and wheels. Dero products, like this 3 Hoop U-Lockit Rack are made by people who personally understand bicycles, which is why hazardous wheelbenders have been eliminated from their design. Each of its three hoops can support one bike on both sides for a total capacity of six. The hoops offer two separate points of contact where bikes can be secured, ensuring they will be both stable and safe from theft. And unlike rounded bars, the square bars used in this structure are not vulnerable to pipe cutters. It can be ordered with a weather resistant coat of powder-based paint in your choice of eight colors, although the metal's durable galvanized finish looks great on its own and is also offered without paint.

For a large parking capacity, take a look at our 4 Hoop U-Lockit Bike Rack - 8 Bike Capacity or the even larger 5 Hoop U-Lockit Bike Rack - 10 Bike Capacity.
