- Unique look that allows bikes to be safely locked up

Unit Size: 2-1/3" x 16.5" x 35"

The possibility of bike theft should never deter someone from enjoying the healthy, environmental sustainable, and cost-saving benefits of cycling. Secure parking structures like this Bike Hitch give people much needed peace of mind and confidence that their valued mode of transportation will be safe while they visit your business or establishment. This particular design features a large number of places that locks can be attached to, for a secure hitch that won't damage the bike. It is compatible with most types of locking devices, including U-Locks. Although one of these racks can accommodate two bikes at once, they are surprisingly space-efficient, so several of them can be installed without taking up a large area. The materials that it uses are majority recycled metal, fortified with zinc galvanization. Surface or in-ground mounts are included, making it simple to install quickly and firmly on most types of surfacing.

The Circle Style Bike Rack creates a nearly full circle that adds even more wow to an area.
