COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The design of the Elite High Back Bucket Seat is specifically made for preschool aged children and toddlers. Its leg holes prevent them from squirming out of the seat while it is in motion, and the high rim and raised back keep children comfortable and upright. The raised back is also a convenient place to use for those pushing the swing. This seat is necessary for introducing children to swinging if they are not yet strong enough to use a belt seat on their own. There are large, secure loops on both sides of the seat that make it easy to connect it to the swing chains. Multiple seat colors available so you can have it match your other swing seats or playground theme. The seats have steel inserts embedded inside the plastic, providing an extremely rigid and sturdy seat.
