The Expanded Metal Portable Frame Picnic Table is one of MyTCoat's best-selling models. This convenient bench has a classic design made from the best materials available. The tabletop and bench seats are made from high-durability steel, which is extremely sturdy in addition to being lightweight. The pattern of diamond-shaped holes guarantees that the tabletop does not get covered in water from precipitation and also makes the table much lighter, and all the more portable. The table can easily be moved into place for certain events or seasons and then put into storage when not in use. The portable base allows it to easily be moved to any surface. There is a wide range of different table lengths available so that you can select one based on your site's capacity needs. For example, smaller 4-foot tables are great for individual families, but 10-foot tables are often ideal for larger events.
