

## MyTCoat Expanded Metal Stacking Chair

**MSRP \$268.00**

**SALE \$229.00**

### Highlights:

- Rounded armrests to help stack chairs
- Slight angle to the back for additional comfort
- Appealing, scroll-like design at the top of the back
- Designed to handle being moved and stacked multiple times

Whether it is being sat next to a patio table or for outdoor events, the Expanded Metal Stacking Chair is a durable outdoor chair that is great for any situation due to its portability and stackability. It is made from our durable galvanized steel, which is shaped into a lightweight but sturdy diamond pattern. The metal is then coated in a layer of durable thermoplastic, which protects it from the elements and makes it more insulated against temperatures. The coating also makes it more comfortable to sit on as it creates a smooth surface that will all allow airflow. This thermoplastic can be colored with a wide selection of different hues to match any table. There is a special Advanced coating option that offers more protection, more color choices, and a seven-year warranty. The chairs can be neatly stacked on top of each other when not in use, making storage easy and space-efficient.
