SALE \$134.00

Highlights:

- Small, and unobtrusive rack
- Designed to last through hard and repeated use
- Only MyTCoat Bike Rack available in an Extra Heavy frame
- Can be used alone or with others to create a larger rack

Bikes are a timeless mode of clean and efficient transportation that never goes out of style. Having a convenient place for guests to park their bikes will encourage more cyclists to visit your establishment. This simple design features a single arch, which can be used to securely park three bikes (one in the middle and two on each side). This makes it great for smaller locations, or if you prefer to spread your bike parking out by spacing a few small bike racks around the area. The One Wave Bike Rack is made from highly durable galvanized steel pipes, producing a robust structure where cyclists can safely link their bikes to. The design is already strong as the standard is made from 1-9/10-inch thick steel pipe. For the customer that wants more reassurance, it is also available in Heavy, 2-3/8-inch thick, or Extra Heavy, 2-7/8-inch thick.
