Highlights:

- 46-inch diameter galvanized steel tabletop
- Rounded seats match the curvature of the table
- Each seat is support by a 3-inch square steel tube
- Powder coat painted frame and coated seats and table top

The MyTCoat Honeycomb Steel Single Post Round Table is a sturdy outdoor bench with a solid square column at its core that holds the table and its seats in place. This makes installation remarkably easy, as only one post needs to be mounted. For mounting options, we offer both in-ground and surface mounting, which allows the table to be installed just about anywhere. Surface mounting is perfect for hard surfaces like concrete and uses a metal plate that is bolted directly into the surface. For softer surfaces like dirt and asphalt, the column can be mounted directly into the ground and held in place with cement. The round table shape of this table is a solid surface and has enough seats to comfortably fit eight people. The tabletop and seats come in your choice of Industry Standard or Advantage coating which depends on the longevity and durability you desire from your table.
