Assembled Dimensions: 270" x 130" x 130"

Use Zone: 35' x 23'

The Gecko play system is a magnificent structure for any play area, particularly one with mostly preschool-aged children. It has all sorts of activities that kids love, including two different slides as well as two climbers. It has three fun activity panels that encourage them to play together and use their imaginations. The Tic-Tac-Toe Panel lets them play the classic game against one another, the Driving Panel has a dashboard and moving steering wheel, and the Storefront Panel is great for creative play. Most parts of the structure are made from recycled plastic which has been re-purposed into strong and long-lasting building materials.
