

School-Age Weather Station

MSRP \$2,589.00

SALE \$2,201.00

Highlights:

- Measures the precipitation
- Has a thermometer to check temperature
- Graph allows weather to be tracked
- Handy spot to place daily assignments

Age Group: 5 to 12 years

The School-age Weather Center is the ultimate outdoor classroom tool for teaching students about weather. It features a Rain Gauge which collects water to empirically measure precipitation levels. It also has a thermometer for measuring the temperature, and a separate wind vane which shows the wind's direction. All of this information can be charted on the board, showing meteorological changes over time. The station even has a built in folder for collecting student assignments. Students love learning outside, and will be fascinated by the precise measurements of weather conditions. With some effort, they can learn to predict the upcoming weather with some accuracy.
