

## Trike Arch Bridge

**MSRP \$2,465.00**

**SALE \$2,219.00**

### Highlights:

- Slightly arched bridge for bike-riding
- Adds elevation and fun to any trike path
- Railing on the side to keep trikes from rolling off
- Horizontal planks make a clickety-clack sound when they roll across

**Age Group:** 6 months to 5 years

---

Challenge your tiny bike riders with the Trike Arch Bridge by Nature of Early Play. This small bridge features a tiny arch that young bikers can ride across to make their ride a tad more interesting or difficult as they use a little extra energy to reach the other side. This structure features recycled material formed into planks that are formed together to give off a wood appearance for the arch. This material is strong and sturdy meaning this bridge can handle most trikes that ride back and forth upon it. The side edges of the bridge is raised to prevent kids from slipping over the edge with the hopes of limiting falls. The raised sides also make this structure ADA accessible, meaning even children with wheelchairs can enjoy this feature. The Trike Bridge can be installed flush on the ground or connect over a small creek or hill and can withstand nearly 400 lbs of weight. Perfect for children 6 months to 5 years and older.
