Bring balance into your play area with the 6 foot Long Graduated Height Balance Beam (Set of 3). Balance is one of the most difficult early skill that all children need to master. It aids them in everything from riding a bicycle to everyday walking. The 6 foot Long Graduated Height Balance Beam (Set of 3) offers to beginner level low balance beams with the added challenge of moving from low to high to low again. The additional angle change at each height change will make even the most coordinated children slow down for a minute. Even after repeated usage, even the child most familiar with it will be given pause as they gather their wits about them before going to the next level. The balance beam is an excellent addition to elementary school playgrounds, after school care areas, parks and churches. There is almost room for children to challenge their balance.
