

## U-Shape Recirculating Triple Water Trough

**MSRP \$3,012.00**

**SALE \$2,711.00**

### Highlights:

- Shape that maximizes the play area while making it easier to monitor
- Includes a pump to add water
- All three troughs include dividers
- Different heights for children to all play comfortably

**Age Group:** 2 to 5 years

The U-Shape Recirculating Triple Water Trough is an excellent activity that allows children to play with an endless stream of flowing water, without a single drop being wasted. The stream starts at the pump, and then cascades past a series of dams, through the three water troughs. At the end of the third trough the water drains into a reservoir that is connected to the pump. The U shape makes it easy to have kids stand on the outer edge while an adult stands in the middle and operates the pump or supervises. It can be fitted with an in-ground or a portable mount.
