

Perforated Style Square Frame Park Bench

MSRP \$1,802.00

SALE \$1,532.00

Highlights:

- Multiple lengths available
- Made of strong perforated steel
- Single and double-sided options let you maximize capacity
- Surface or in-ground mounting options

If you are looking for a park or recreation area bench that provides an interesting and durable design, the Perforated Style Square Frame Park Bench by Webcoat is a great choice. The seats and back are made of heavy perforated steel that features wide curved edges. This approach to the metal shaping heightens both comfort (no harsh angles to rest legs against) and safety (less chance of injury from an accidental fall). The primary framework is a duo of resilient 4-inch square pedestals, so you know that this unit can handle a lot of daily use. This commercial-grade outdoor furniture is available in a six-foot and eight-foot long version. And further seating optimization can be achieved through the selection of a single-sided or double-sided option. Both the single and double-sided options have economically sized footprints, which will open up placement selection when installing at your location. Further customization is possible via the wide range of color choices for both the powder-coated frame and the textured polyethylene seat. Please speak to a AAA State of Play salesperson to learn more about choices and scheduling. The Perforated Style Square Frame Park Bench can be bought in surface or in-ground mounting styles.
