The Early Childhood T Swing brings outdoor fun to even the smallest of daycare school yards. The swingset is designed to use a lower than average top rail with a bucket seat on each side. The swing still gets the height that a toddler or preschool will enjoy while increasing the chances that it will fit in a small play area. The two seat design ensures that there is plenty of room for children and parents to comfortably use the swing set. The swingset itself is constructed from steel which is then powder coat painted in your choice of Cobalt Blue or Rainforest Green to get it within a week or two or by waiting an additional five or six weeks, you can choose any of our custom colors giving you the greatest freedom in your playground design. Order with black bucket seats and precut chains or choose to order chains and any color of bucket seat separately.
