

Gateway Recycled Plastic Slatted Bench without Back

MSRP \$1,643.00

SALE \$1,397.00

Highlights:

- Eye-catching aluminum framework
- Color customization options available
- Features combined portable and surface mount frame
- Backless design allows for sitting from both sides

The Gateway Recycled Plastic Slatted Bench without Back by Webcoat is a pleasingly designed seating solution that has a powder-coated aluminum frame attractively shaped into gentle curves. The sitting area itself is made of recycled plastic into 2-inch x 4-inch planks that have the resemblance of wood without all the pesky maintenance. This fetching bench would work well in shopping malls, schools, parks, and in waiting areas. The backless design permits users to access both sides of the bench, enabling a greater degree of freedom for where you can place this unit. The smartly arranged planks of the bench allow for airflow to make its way through the bench which helps keep users cool while also accelerating drying after a rain shower. The Gateway Recycled Plastic Slatted Bench without Back by Webcoat can have both its powder-coated frame and recycled bench planks' colors altered from those shown here. Please contact a AAA State of Play salesperson for more information about which colors are available and learn what scheduling might be required.
