Get the Cascades Trash Receptacle with Liner and Lid (3 Lids to Choose) by Webcoat and watch your site's littering problems disappear. This trash bin has a traditional plank design that resembles wood but is actually made of recycled plastic. This gives the trash bin the classic wooden look without the bothersome maintenance that it brings such as termites, rotting, and splinters. The upper exterior also features unique detailing around the lid for a cultivated look that can add a bit of flair to an outdoor mall, business entrance, pocket park, or school grounds. Three different types of lids offer something for everyone. The Flat Top lid provides a sleek finish while the Ash Bonnet lid offers a safe spot for smokers to place their cigarette butts. The Rain Bonnet lid is perfect for rainy areas and disperses water away from the liner. With a 32-gallon capacity, this bin can handle the busiest of days. The unit is purchasable as a portable unit with surface mounting hardware sold separately. The plastic planks are available in multiple colors. Please contact a AAA State of Play salesperson for more information.
