### Highlights:

- 6-foot long bench offers room for multiple guests to sit at once
- Powder coated paint produces a durable finish
- Curved seat and back offers comfortable seating
- Several color options available for personalization
- Steel construction for added strength

Get the sophisticated Arches Steel Slatted Bench with Back for your commercial property. The slats are made from steel, creating a strong and durable bench that can withstand years of use despite the rain, sleet, or snow. Its weather endurance is also helped by its spaced slats that allow water to drip through. This also allows wind to pass through, cooling seaters off on a warm day. Both the seat and back are slightly curved, allowing for an ergonomic design that makes it more comfortable for resting people. The curved seat allows a user's legs to swing back and forth while the curved back promotes good posture. There are two 3-inch square tube legs to provide a strong base. The bench is powder-coated and comes in a diverse set of hues to match your business, hospital, park, or school. The 6-foot bench is available as an in-ground or surface mount unit. Ask a salesperson for more information.
