- Customize the colors of the planks and frame to match your location
- 2-3/8-inch steel tubing framework provides a robust base
- Planks use at least 96% recycled plastic to reduce waste

The Arches Recycled Plastic Slatted Pedestal Table by Webcoat is a sound purchase for site designers looking to add functional seating solutions to a location while also minimizing a carbon footprint. The planking of this unit's seats and tabletop are built of recycled plastic material that has the look of wood but will not rot or produce harmful splinters. These planks will stand the test of time without the pesky maintenance that more traditional wood seating might require. This 6-foot long table with similarly sized bench seats would work great at a pocket park, exterior office break area, or on the grounds of a zoo or college campus. This unit is available with surface mounting for hard surfaces or with in-ground mounting hardware to place it in soil. The colors of the powder-coated frame and the planks can be tailored to better match your school, organization, or park. Please reach out to a AAA State of Play sales representative to learn more about currently available colors and discuss scheduling.
