- Stout foundation features a 4-inch steel frame

Webcoat's Arches Steel Slatted Cantilever Table is a resilient and attractive commercial-grade furniture unit that would match well with university campuses, school grounds, park spaces, or museum exteriors. The durable steel of the cantilever supports, benches, and table is finished with a powder coat application that will help the paint job stay lustrous and bright. The hearty nature of steel further assists in the longevity of the unit, as steel is simply more resistant to scratching and can better hide the times abrasions do occur. The attractive lines of this 6-foot tabletop and 4-foot benches add up to make a unit as suitable for outdoor dining as it is for study breaks or impromptu meetings. The Arches Steel Slatted Cantilever Table has surface or in-ground mounting hardware options and can have its colors customized to best fit in with the surroundings of your site. Please call or email a AAA State of Play sales representative to hear more about currently available colors.
