- Diverse set of color choices to personalize the unit
- Portable design keeps it mobile (mounting kit sold separately)

Keep your establishment clean and tidy with the fashionable Arches Recycled Plastic Slatted Trash Receptacle with Liner and Lid (3 Lids to Choose From). This trash bin is an excellent addition to any park, school, sidewalk, or mall. By default, this waste bin comes as a portable unit which permits the trash receptacle to be placed anywhere. This can be a benefit when you need to relocate the bin during special events or move it to areas with larger amounts of activity. Alternatively, you can secure the bin in place with a mounting kit (mounting hardware sold separately). This receptacle comes with a 32-gallon capacity heavy-duty plastic liner, and with one of three lid types: a standard flat top, flat top with ash bonnet, or flat top with rain bonnet. The leveled flat top lid is a minimal design with a standard opening where waste is deposited. The ash bonnet lid has an additional separate collection tray specifically for depositing smokers' waste; this lid overhangs the primary waste opening and can help reduce the odds of an accidental fire occurring in the liner. The rain bonnet lid overhangs the primary opening and helps divert liquids to prevent water accumulation within the liner, making it ideal for areas that experience heavy rainfall. Built with the environment in mind, the bin is made from recycled 2-inch x 4-inch plastic planks that come in a variety of colors to match your space. [\[Read More\]](#)
