Webcoat's Dog Log Recycled Plastic Dog Park Play Equipment is a wonderful way to enhance the appeal of your park's dog activity area and earn the approval of canine owners. Installing little activity spots in a bark park helps keep high energy dogs engaged and gives their owners a chance to help train their furry companions. This particular unit is a short tunnel that a dog will get to scamper through after a short step up. Just imagine the excitement as Fido plays hide-and-seek with a person calling from the other end! This piece of dog play equipment is constructed of strong materials and incorporates some environmentally-friendly features. The posts are built of 100% recycled high-density polyethylene (HDPE) plastic and the panels feature UV-stabilized HDPE. The tube is made of roto-molded plastic and features static inhibitors to create a pet-friendly environment. The Dog Log Recycled Plastic Dog Park Play Equipment uses in-ground mounting hardware and is simple to clean and maintain.
