- Wonderful way to train dogs
- Improves canine dexterity and problem solving
- Liven up play areas

Webcoat's Jump Thru Panel Recycled Plastic Dog Park Play Equipment is a play activity station that is easy to maintain and built of durable components. Some of the material is ecologically balanced as well; the posts are made of HDPE plastic that's been 100% recycled. The primary material is a UV-stabilized HDPE plastic panel that is embellished with a charming paw print etched into one corner. This jump spot will give owners the chance to direct their dogs towards a specific goal of leaping through the portal. Other pooches just might be naturally inclined to hop the obstacle for the sheer joy of it. It is important to include additional components in a dog park beyond the bare amenities of grass and perimeter fencing. Dogs benefit from engaging playtime much like people do. Having items like the Jump Thru Panel Recycled Plastic Dog Park Play Equipment present can keep owners coming back and wanting to support the dog park in their community. This item uses in-ground mounting hardware to keep it in place.
