- PVC coating reduces chance of skin pinches or snags
- Resilient galvanized steel interior that's built to last
- Sold individually

COMPLIES With:

ASTM F1487-17
CPSC PUB #325

If you're looking to update parts of your swing set's current setup, consider replacing your metal chains with our PVC Coated Metal Swing Set Chain. These commercial-grade 78-inch length chains are perfect for use with swing sets having an 8-foot top rail height, like the units we recommend for installation of our Elite Belt Swing Seats. Their vibrant range of colors will brighten the mood of any play space and the primary hues are particularly eye-catching to kids. These chains are built with both safety and comfort in mind. Uncoated chain links run a small risk of pinching a youngster's skin while they're swinging. The PVC application on these chains both eliminates that likelihood and generally will just feel nicer to grip at all times of the year. No more extremely cold metal chains getting grabbed by ungloved hands on cold days or unpleasantly hot metal being touched in the summertime. Only a small portion of the highest length of the chain is left uncoated. This is to allow for easy connection of the chain to single or double clevis shackles along the top rail. These tough playground swing chains are built to handle heavy regular use.
