ASTM F1487-17

CPSC PUB #325

Provide a safe and comfortable first swing experience with our Individual PVC Coated Metal Swing Set Chain. These commercial swing set chains are a wonderful upgrade to the traditional metal swing set chain. Made of galvanized steel and coated in PVC, these playground swing chains are cut to 60" of length and are designed to withstand the elements as well as heavy and repeated use on even the busiest playgrounds. The chains are designed for use with our Elite High Back Bucket Swing Seat on swing frames with an 8 ft top rail height. Young children will love the bright and vivid colors and smooth, safe grip the PVC coating provides. Keep young riders safe from pinching their fingers, and give them exceptional grip for a tranquil ride. Stay on top of swing maintenance for your community or school playground by regularly checking swing parts for wear or rust to prevent accidents. These premium chains are perfect for replacing old or worn-out chain, as they easily connect to single and double clevis shackles. Please Note: Green is temporarily out of stock for 60" chains.
