

Recycled Plastic Fitness Parallel Bars with Exercise Panel

Price \$4,093.00

Highlights:

- A reliable exercise to include on a fitness path or at a park
- Uses recycled plastic material for large parts of its build
- Sturdy stainless steel hardware
- Builds arm strength and core muscles

Age Group: 5 to 12 years

Play Mart's Recycled Plastic Fitness Parallel Bars with Exercise Panel provides a time-proven exercise that would make an excellent addition to your site's fitness trail, park space, or schoolyard. The robust stainless steel rails help users strengthen their arms and central torso as they attempt to elevate their bodies up and over the bars in order to shuffle along using only their upper musculature. And this unit will also work as a great introduction for curious users looking to explore entry-level gymnastics. Significant portions of this product use Play Mart's proprietary Recycled Structural Plastic (RSP), which has zero of the issues of traditional wooden fitness equipment. Painting upkeep is reduced for RSP and the material will not produce bothersome splinters. The material is also graffiti resistant and will not rot as natural wood tends to do. The Recycled Plastic Fitness Parallel Bars with Exercise Panel come with an HDPE sign that suggests both entry-level and advanced level exercises that can be performed on the equipment.
