Age Group: 5 to 12 years

Capacity: 3 - 4 children

Use Zone: 14' x 14'

The Recycled Plastic Rock Tower Fitness Climber offers a superb, compact climbing activity to any playground. Climbing is a great activity for kids. It increases strength, balance, coordination, and improves motor planning skills as kids think of their next move. This unit features four posts set at different heights that offer varying ranges of difficulty. Strategically placed rock handles offer foot and hand grips for children to scale up and down the unit. Varying post heights allow kids to work their way up as they get more comfortable and also permits multiple kids to climb at once. The skinny posts mean that this unit will fit in even the tightest of spaces. Since it does not take up much room, it is a great addition to any playground. Additionally, the unit uses recycled plastic to create an environmentally friendly structure. Contact a AAA State of Play sales representative for more information.
