

Recycled Overhead Horizontal Ladder with Rings

Price \$4,437.00

Highlights:

- Swinging will help children build strength and boost coordination
- A small booster step helps users start playing
- Metal support bars on the posts keep the unit stable
- Built partially from recycled plastic material for an eco-friendly design

Age Group: 5 to 12 years

The Recycled Overhead Horizontal Ladder with Rings by Play Mart is a sturdily built commercial-grade playground unit that smartly combines helpful exercise with fun swinging. This overhead climber showcases eight rings connected to a horizontal bar. These easily graspable metal handholds have some natural give thanks to the chains connecting them to the upper framework. This allows kids to use their strength to move from ring to ring and combine that with built momentum when they are not quite able to reach the next grip. Over time, the natural play that emerges from this kind of activity helps youth boost their muscle growth and improve their hand-eye coordination. The activity unit features a helpful step at one end that shorter users can utilize to get started on the rings. The Recycled Overhead Horizontal Ladder with Rings unit is built of tough stainless steel and a large amount of its remaining material is composed of Play Mart's proprietary Recycled Structural Plastic.
