

## Recycled Horizontal Overhead Ladder

**Price \$4,661.00**

### Highlights:

- Elevated rungs strengthen upper bodies as kids move across
- Eco-friendly structure that uses recycled material
- Step-up block eases access and directs activity flow
- Metal support posts create a sturdy base

**Age Group:** 5 to 12 years

---

Complete your playground with the Recycled Horizontal Overhead Ladder. Moving across overhead ladders is a superb activity for children that helps them develop strong bodies. Kids will work on their hand-eye coordination as they use momentum to shift their bodies from handle to handle. It is also a tremendous way to build arm muscles and increase grip strength. A helpful step-up block helps youngsters reach the elevated rings while also serving as a way to control the activity flow of users on the unit. This structure is stellar as a stand-alone product or as a connector between two activities. Combine it with other climbers to create a neat adventure zone. Though the posts look like wood, they are actually made of recycled high-density polyethylene plastic. It will not rot, splinter, or attract termites as lumber does, creating a low-maintenance unit. Best of all, it helps reduce plastic waste! Each post has a metal support bar to create a sturdy base that resists oscillation as kids swing across.
