- Ecological construction that uses recycled plastics
- Can accommodate up to 15 kids at once for added fun

Age Group: 5 to 12 years

Capacity: 10 - 15 children

Use Zone: 38' x 29'

The Pikes Peak Recycled Playground Fitness Climber without Steppers or Balance Beam would make an amazing addition to any schoolyard or park. This commercial-grade climbing structure has a diverse range of areas for kids to scramble up, over, and across. No matter what a child's ability level, there is a place for them to attempt to improve their agility or strength. The metal rungs of a Deep Rung Loop Climber allow kiddos to scale up an arch towards a connected series of balance platforms. From there, users can clamber up and through a rock wall, which has been generously decorated with knobby grips. The wall is also connected on either side by a duo of Vortex Climbers whose twisty rungs will be especially challenging to navigate. Finally, the unit has a Double Jog Ring Ladder whose two rows of hand grips move through three changes of elevation from one to end to the other. The Pike's Peak does not have steppers or a balance beam but is an ecologically friendly product that is partially built from Recycled Structural Plastic.
