

Recycled Pipe Wall Playground Climber

Price \$3,931.00

Highlights:

- Metal support posts for in-ground stability
- Slender and compact design will fit in a variety of locations
- Made with recycled material to reduce waste
- Great way to develop strength and coordination

Age Group: 5 to 12 years

Play Mart's Recycled Pipe Wall Playground Climber is a simple and easy-to-use structure that kids can climb. Energetic children will love scaling the horizontal bars. As they hike up the unit, they will improve their coordination and strength. Handles at the top of the structure allow kids to hang on and revel in their accomplishment. They can even use them to go over the bars and climb down the other side. To prevent swaying and oscillation as kids climb, four metal bars extend outwards to provide a stable base. The posts use recycled high-density polyethylene. The reused material provides a strong foundation that will not rot or produce any splinters like wood posts normally do. This helps to create a low-maintenance unit as well as reduce its carbon footprint and helps to keep plastic out of the environment. The slim, vertical design does not take up much space. This allows it to be placed in compact areas and will complement any existing playground, making it ideal for your school or park.
