

Cyclone Recycled Plastic Balance Platform

Price \$5,319.00

Highlights:

- Spinning improves a child's balance and kinesthetic awareness
- Off-axis platform increases momentum as it spins
- Wide platform encourages cooperative play
- Encased chains are comfortable to grip and prevent pinching

Play Mart's Cyclone Recycled Plastic Balance Platform is a commercial-grade playground spinner that uses smart engineering to produce a safe and fun twirly ride. This commercial-grade unit is a freestanding installation that operates as a modern swirling activity. Like a mixture of a merry-go-round and a tire swing, the Cyclone permits kids to use their momentum to circle around over and over again. With an occupation capacity for up to two children, this product can keep moving as long as there is somebody to help swivel the grips or users aboard with the energy to keep bouncing the spring-action platform. That platform is slightly off-axis to enable users to further develop their momentum. It is also covered with a protective layering around its edges to help prevent injuries. These chains that connect the platform to the overhanging ring are covered in a resilient layer of smooth material that prevents hands from being pinched and offers an all-around comfortable handhold to grip.
