Fall Height: 96"

Use Zone: 35' 5" x 35' 5"

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

Children can embark on an extraterrestrial journey and travel through the stars on the Constellation Station Web Climbing Maze. This intricate structure consists of five separate circularly woven steel ropes covered in nylon. Each section is supported by vertical steel posts spaced equally apart from each other. The posts are rust-resistant, powder-coated and painted a color of your choice with a glossy finish to suit the scheme of any park, school or other recreational area. The support posts provide stability and help with maneuverability, as each has netting attached at three different elevations. The multiple rope attachment points allow kids to safely use their hands and feet to move from one section to another along different heights of their choosing. This maze climber challenges school-age children to use important muscle groups and develop their physical skills and abilities. Additionally, climbers like this one can spark their imagination by inspiring various games and make-believe adventures. The sales team at AAA State of Play is available to help you bring creative play to your playground.
