ASTM F1487-17

CPSC PUB #325

Capture the attention of passersby with the noteworthy and colorful Kids Fitness Floating Tunnel Bridge. To produce levitating rings, a pair of arched steel posts are first assembled to create a solid frame. The rings are then fastened in place by nylon coated steel cables that attach to the posts and the ground. Together, the construction produces a durable, secure, and safe unit that will stand the test of time. This sturdy commercial grade installation is perfect for schools, parks, or other public spaces that want an exciting and bold new structure to add to their venue! The kaleidoscopic hoops will attract kids from all over the playground, encouraging socialization and friendship. Kids can hop through the rings one at a time or just perch within one or two. Children can imagine they are part of a circus or competing in a new Olympic event. Kids will work on their balance and coordination to get through this slithering snake-shaped obstacle.
