Provide a fun way to develop communication skills with Playground Equipment Dot-com's Independent Talk Tubes Auditory Learning installation. The unit offers an excellent way to help young minds grow. As children speak with one another, they will work on language, listening, creative, and social skills all in one place. Best of all, this pair of talk tubes is great for kids of every age. Young children can experiment with sounds while older kids can create their own codes - the options are endless. Talk tubes offer a superb method for children to work on their social skills as they communicate with friends, old and new. Imaginative play is highly encouraged as children replicate the childhood staple game of telephone. Or they can pretend they are spies sending secret messages across the yard. Children will have a blast as they chat and laugh for hours on end!
