COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The Independent Play Bones Bridge by Playground Equipment Dot-com is a commercial grade children's play installation with a cool visual design. Constructed to resemble a brightly colored version of a set of bones, this unit will quickly engage the curiosity of children aged 2 to 12. The curved flooring challenges travelers to adjust their positioning in order to successfully cross from one side to the other, which helps kids grow their kinesthetic learning and enhance their dexterity. This bridge can be used as a transfer point that encourages movement between existing play spaces or simply presented as its own spot for fun play. Spacing between the slats also helps put parents at ease, as they're able to glance inside and ensure children are playing safely. The quirky bridge slats and robust stainless steel posts are available with the colors shown here or you can have them adjusted to better match your site's aesthetics. Just call or email to learn more about custom coloring from a AAA State of Play representative.
