### COMPLIES With:

ASTM F1487-17

CPSC PUB #325

Climbing is an ideal exercise for developing school-age children and the Freestanding Curved Post Straight Rung Vertical Ladder makes that activity possible at parks, daycare facilities, schools and more. It provides a near full body workout, targeting arm, leg and hand strength. As kids alternate pushing themselves upwards with their legs and pulling with their arms, they are advancing their hand and foot coordination as well. And on top of all of that, climbing improves agility and gross motor skills over time. For those reasons and many more, play elements like this Vertical Ladder are important additions for a diverse and physically challenging playground. This installment is built with commercial-grade materials, like the powder-coated steel posts, that withstand harsh weather and resist rust and moisture. The bars are spaced perfectly for climbers of school-age. Several children can play together and create games and friendly competitions. Ask a AAA State of Play salesperson about our many vivid color options for the Freestanding Curved Post Straight Rung Vertical Ladder.
