- Built with anodized aluminum for UV protection
- Can be easily packed and transported in included bag

COMPLIES With:

ASTM F1487-17
CPSC PUB #325

Set up for a game on any surface with the Mongoose Wireless Outdoor Volleyball System from Gared. This tension-operated design eliminates the need for guy wires that could potentially cause tripping hazards. The two aluminum 1 ½ inch diameter uprights are anodized for weather and UV protection. Additionally, they are padded with 1 ½ inch thick polyethylene foam for safety and pre-drilled for various setups to suit many ages and regulations. This volleyball system includes sand wedge adapters for beach play and optional conversion sleeves are available for indoor use. The free-floating nylon portable volleyball net is 32 feet by 39 inches with a vinyl-coated polyester hem around the edges. It can be securely attached using bungee cords with plastic-coated steel clips. This system is appropriate for indoor and outdoor play, including grass and sand, and can be easily transported in the included travel bag.
